Ideation Phase
Empathize & Discover

Date	31 January 2025
Team ID	LTVIP2026TMIDS76805
Project Name	Online Payments Fraud Detection using Machine Learning
Maximum Marks	4 Marks

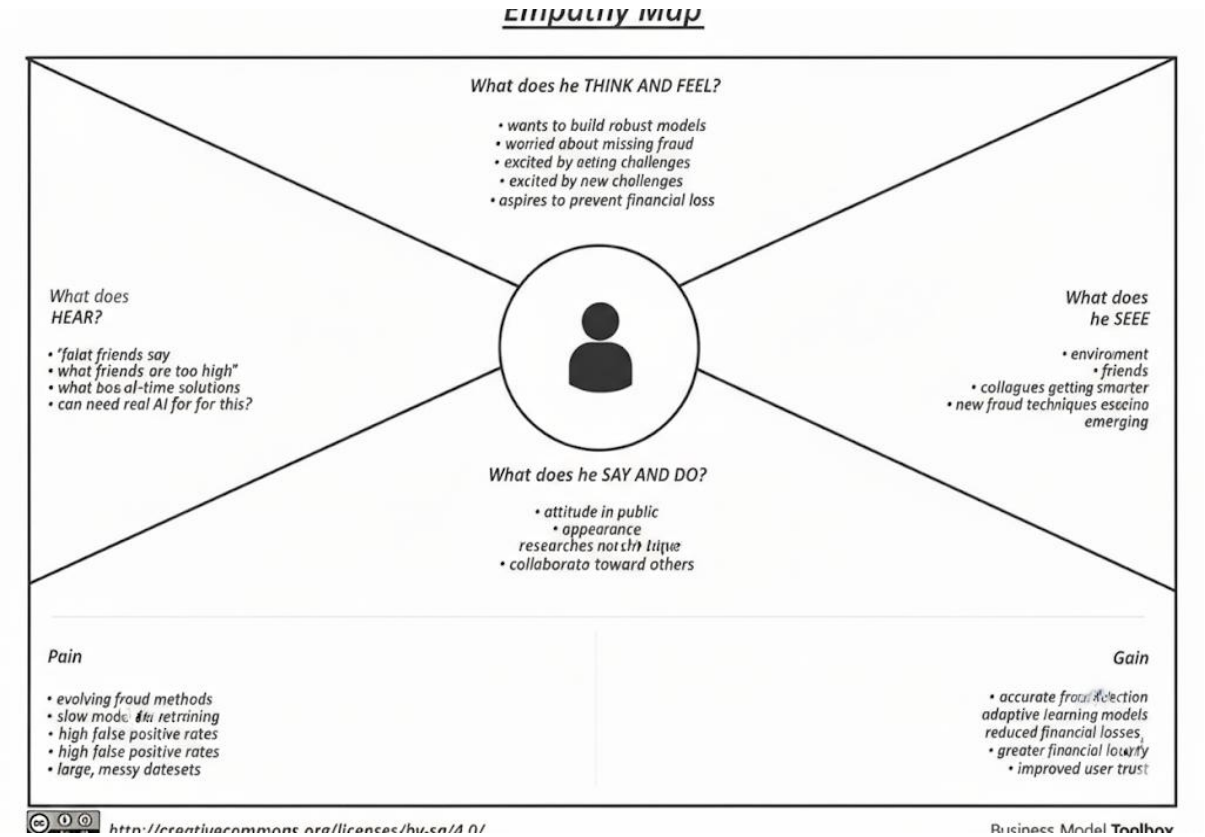
Empathy Map Canvas:

An empathy map helps us understand the user's thoughts, feelings, goals, and challenges. For this project, we considered two main users:

- Online Payment User (Customer)
- Bank / Fintech Company

Below is the empathy map for an **Online Payment User**.

Example:



User: Online Payment Customer

What the User Says

- "I want my transactions to be secure."

- “I don’t want anyone misusing my bank account.”
- “Online payments should be safe and reliable.”
- “I should get alerts for suspicious activity.”

What the User Thinks

- My account details might be stolen.
- Fraud can happen anytime.
- Banks should protect my money.
- I need strong security while making payments.

What the User Sees

- News about increasing online fraud cases.
- Fraud alerts and scam messages.
- Complex security verification processes.
- Payment apps asking for OTP verification.

What the User Hears

- Stories from friends about fraud incidents.
- Bank warnings about suspicious transactions.
- Social media posts about cybercrime.
- Advice to avoid sharing personal information.

User Pain Points (Challenges)

- Fear of losing money.
- Delay in fraud detection.
- Difficulty in recovering lost money.
- Lack of trust in digital platforms.

User Goals

- Safe and secure transactions.
- Instant fraud alerts.
- Protection of personal and financial data.
- Quick action against suspicious transactions.
